

**SAWAED ARAB
CONTRACTING
COMPANY**

Integrated infrastructure for difficult terrain

SAC combines civil construction scale with specialist geotechnical delivery — allowing clients to coordinate roads, structures, utilities and slope protection through one accountable team.

INTEGRATED

**Civil Structures,
Roads, and
Infrastructure**

SPECIALIST

**Rock + Slope

OUR VISION

- We aspire become the Regional Leader for large scale in (General Contracting, Structures, Tunneling, Bridges, Roads, infrastructures, and Rock Cutting and stabilization) project of all methods.
- To become an essential and active part of all projects that support **Royal Vision 2030**

OUR BELIEF

We believe that success comes from co-operation and people's strengths. We put all our company resources experiences knowledge, synergies and innovative spirit of our people at the service of our customers.

By cooperating with our customers, suppliers, employees and communities, we focus our expertise and resources on developing the most promising markets by:

- Providing competitive, valued, superior quality products to our customers
- Creating new market opportunities for our suppliers
- Sustaining the professional development of our employees

VISION 2030

Lead large-scale infrastructure, shotcrete, wire-netting, rock-cutting and fast-track slope-stabilization projects - while supporting partners across the Kingdom.

01 Civil delivery across transport and difficult terrain

- Road construction and asphalt works
- Concrete bridges and culverts
- Tunnel and portal support works
- Maintenance in mountain corridors
- Coordination with rock cutting and slope protection

04 Rock-cutting methods follow geology and risk

METHOD SELECTION

- Mechanical breaking
- Trim-blasting.
- Chemical expansive material
- Controlled drilling and blasting
- Specialist cutting

Controlled blasting uses defined controls

- 01 Drill pattern
- 02 Charge design
- 03 Timing
- 04 Protection
- 05 Trim & support

Blast mats may be used to control flyrock, dust, noise and blast direction.

Scaling removes immediate rockfall hazards

Rope access • hand tools • air pillows
• hydraulic jacks • lifts • long-reach
excavators

Rock bolts, Mesh, and shotcrete form a coherent protected face

SYSTEM LOGIC

- Prepare and scale
- Install anchors
- Fix galvanized mesh
- Apply dry or wet shotcrete
- Verify thickness and drainage

Mesh, openings, wire diameter, anchors and thickness follow the approved design and site conditions.

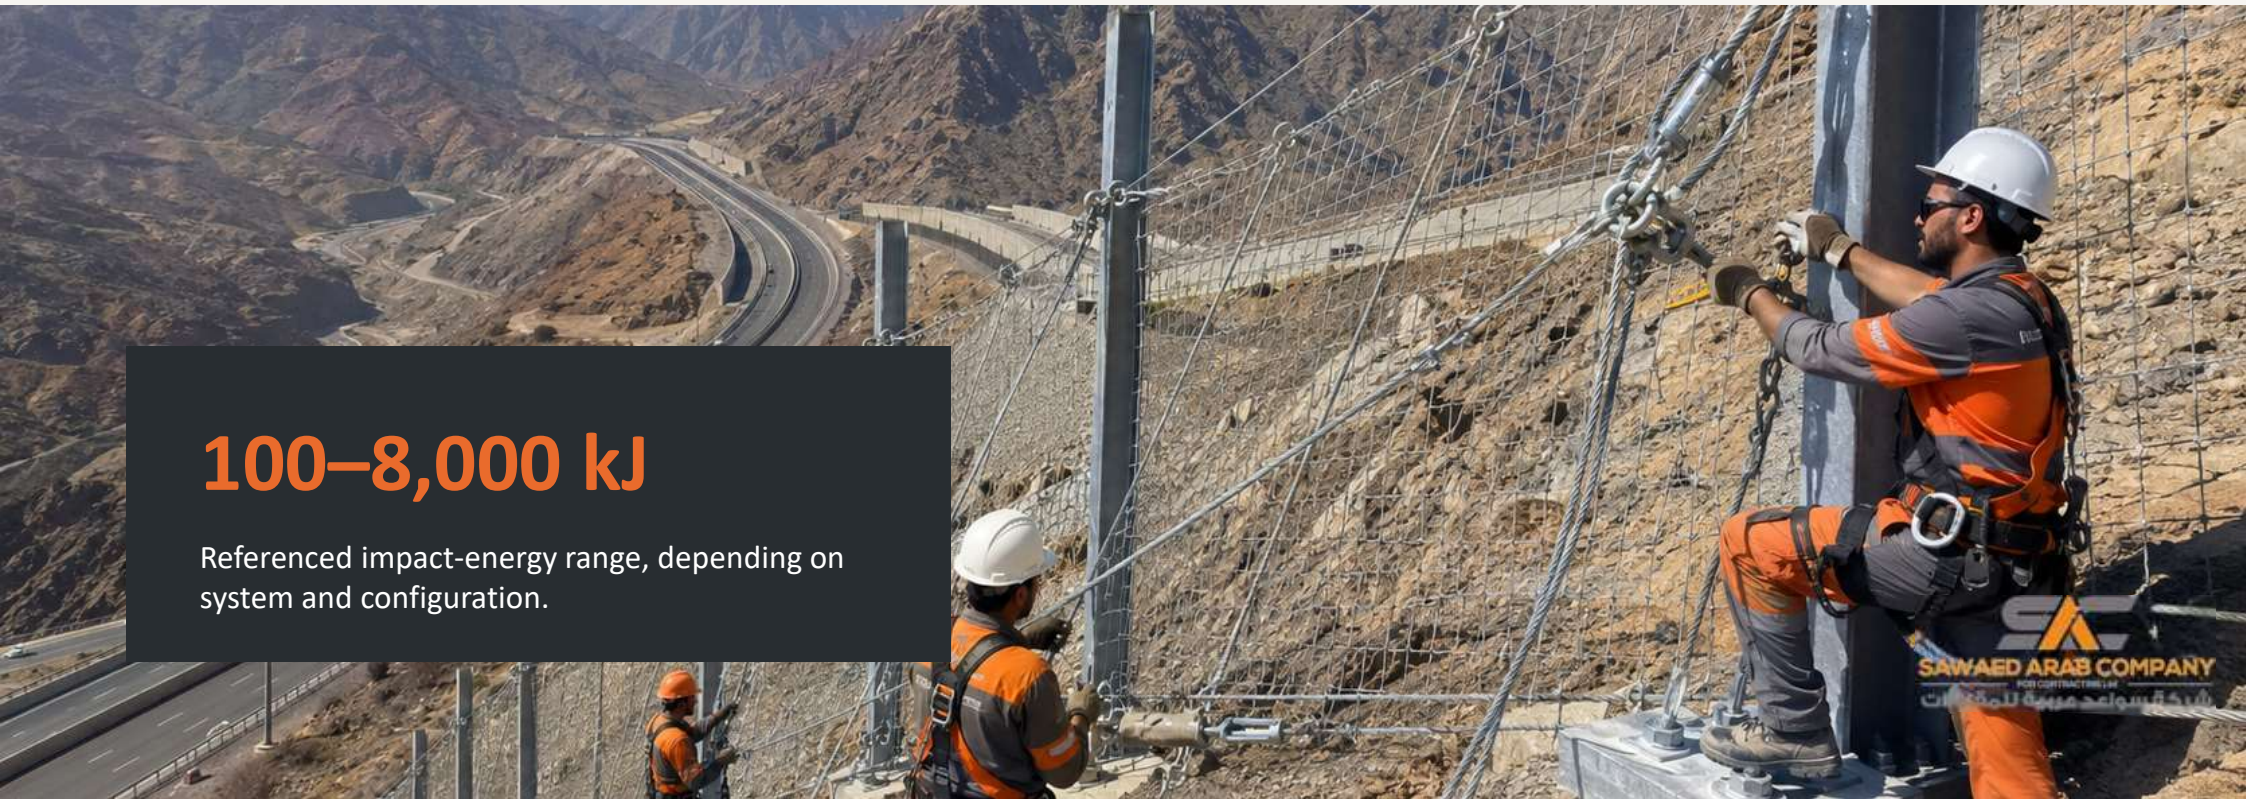

05 Protection Works.

High-tensile barriers protect roads from rockfall

100–8,000 kJ

Referenced impact-energy range, depending on system and configuration.

Passive protection controls erosion and falling material

GABIONS

Galvanized mesh baskets filled with graded rock form a continuous, permeable protective structure.

Retains material • protects channels • permits drainage

RIPRAP

Durable, interlocking rock protects slopes, valleys, embankments and bridge approaches from erosion and hydraulic scour.

Stone size and layer thickness follow hydraulic and geotechnical requirements.

06 Specialized Structure

Shoring protects people, assets and adjacent structures

- Retaining walls with bracing or anchors
- H-beams with timber or steel lagging
- Sheet piles
- Contiguous pile systems

System selection depends on depth, ground conditions, groundwater, adjacent loads and nearby structures.

Concrete repair restores durability and serviceability

- Remove unsound concrete
- Clean and treat reinforcement
- Apply repair mortar or formed concrete
- Inject cracks
- Protect with coatings and waterproofing

Related services include epoxy injection, cementitious waterproofing and specialist concrete cutting.

Robotic shotcrete limits worker exposure

SAFER ACCESS

Remote and robotic application supports tunnels and difficult slope surfaces while improving reach and consistency.

Climbers Team — Rope Access & Scaling Division

The “Climbers Team” is Sawaed Arab’s dedicated, specialized rope-access division, formed to deliver safe and efficient work-at-height and scaling operations on rock faces, cliffs, structures and confined or difficult-to-reach areas where conventional access methods (scaffolding, cranes, MEWPs) are unsafe, uneconomical, or physically impossible.

The team is fully certified under the IRATA International scheme (Industrial Rope Access Trade Association) across all three technician levels, and applies the IRATA International Code of Practice (ICOP) and General Requirements for Certification of Personnel on every task, supported by Sawaed Arab’s HSE management system.

IRATA Certification Structure

Every Climbers Team member holds a valid IRATA International Rope Access Technician certificate. Certification is independently assessed and logged in the IRATA member database, with each technician's ID card and logbook available for client verification prior to mobilization.

Level 3 | Site Supervisor

Full technical & rescue competence; responsible for safe system of work, permits, and team supervision

Min. Experience: ≥ 12 months as L2.

Level 2 | Senior Technician

Advanced rigging, rescue techniques, deputizes for supervisor

Min. Experience: ≥ 12 months as L1.

Level 1 | Rope Access Technician

Works under supervision of L3; basic rope access, ascending/descending, rigging awareness

Min. Experience: Logged working days + exam.

Scope of Rope Access & Scaling Services

Category 1: Rock Scaling & Slope Stabilization

- Manual and mechanical scaling of loose rock on cut slopes, cliffs and highwalls
- Removal of loose material identified during geotechnical inspection
- Installation of rock bolts, dowels and anchors from rope access
- Shotcrete surface preparation and rope-access assisted spraying support
- Slope mesh and TECCO / high-tensile netting installation

Category 2: Rockfall Protection Systems

- Installation and maintenance of mechanical rockfall barriers
- Draped mesh systems for erosion and rockfall control
- Wire rope anchoring and tensioning systems

Scope of Rope Access & Scaling Services (Continued)

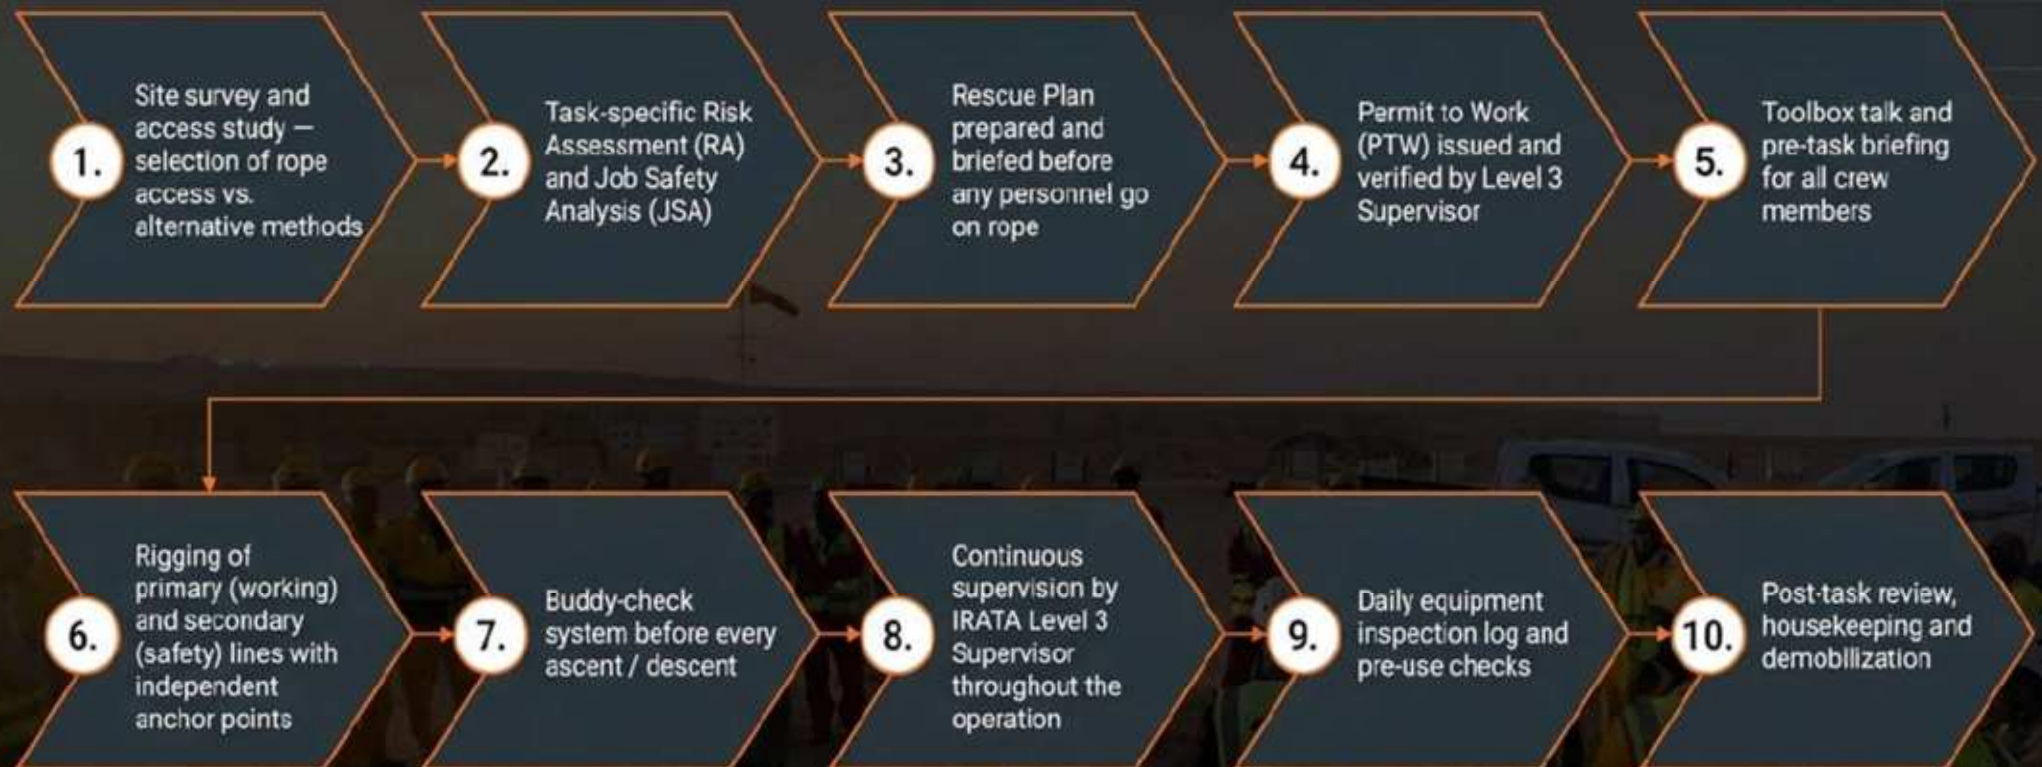

Category 3: Inspection, Maintenance & Access-Critical Works

- Structural and geotechnical inspection of slopes, bridges, and tall structures
- NDT support and defect mapping at height
- Coating, waterproofing and surface treatment in inaccessible areas
- Cleaning and vegetation clearance on rock faces and facades
- Emergency response scaling following rockfall incidents

Methodology & Standards

The Climbers Team plans and executes every task through a structured, auditable process aligned with IRATA ICOP, Saudi HCIS/MoL requirements, and client-specific HSE plans:

Equipment, Materials & PPE

Rope Access Equipment

- Static kernmantle ropes (working and safety lines), EN 1891 compliant
- Descenders, ascenders and back-up devices (EN 12841 / EN 353-2)
- Full body harnesses with chest and seat attachment (EN 361 / EN 813)
- Rigging hardware — connectors, pulleys, rope protectors, edge protection (EN 12275 / EN 362)
- Anchor slings, rigging plates and mechanical/chemical anchor systems
- Rescue kits — stretchers, hauling systems, tri-pod / davit arms where required

Scaling & Site Materials

- Scaling bars, pry bars and hand tools for manual loose-rock removal
- Pneumatic and hydraulic breakers for mechanical scaling
- High-tensile steel mesh, TECCO netting, wire ropes and anchoring hardware
- Rock bolts, resin and cement grout anchors

Personal Protective Equipment (PPE)

- Helmets with chin strap (EN 12492), rated for work at height
- Cut-resistant gloves, safety footwear, high-visibility clothing
- Fall-arrest lanyards and shock absorbers as secondary protection
- Eye and hearing protection for mechanical scaling operations

Emergency Preparedness & Safety Requirements

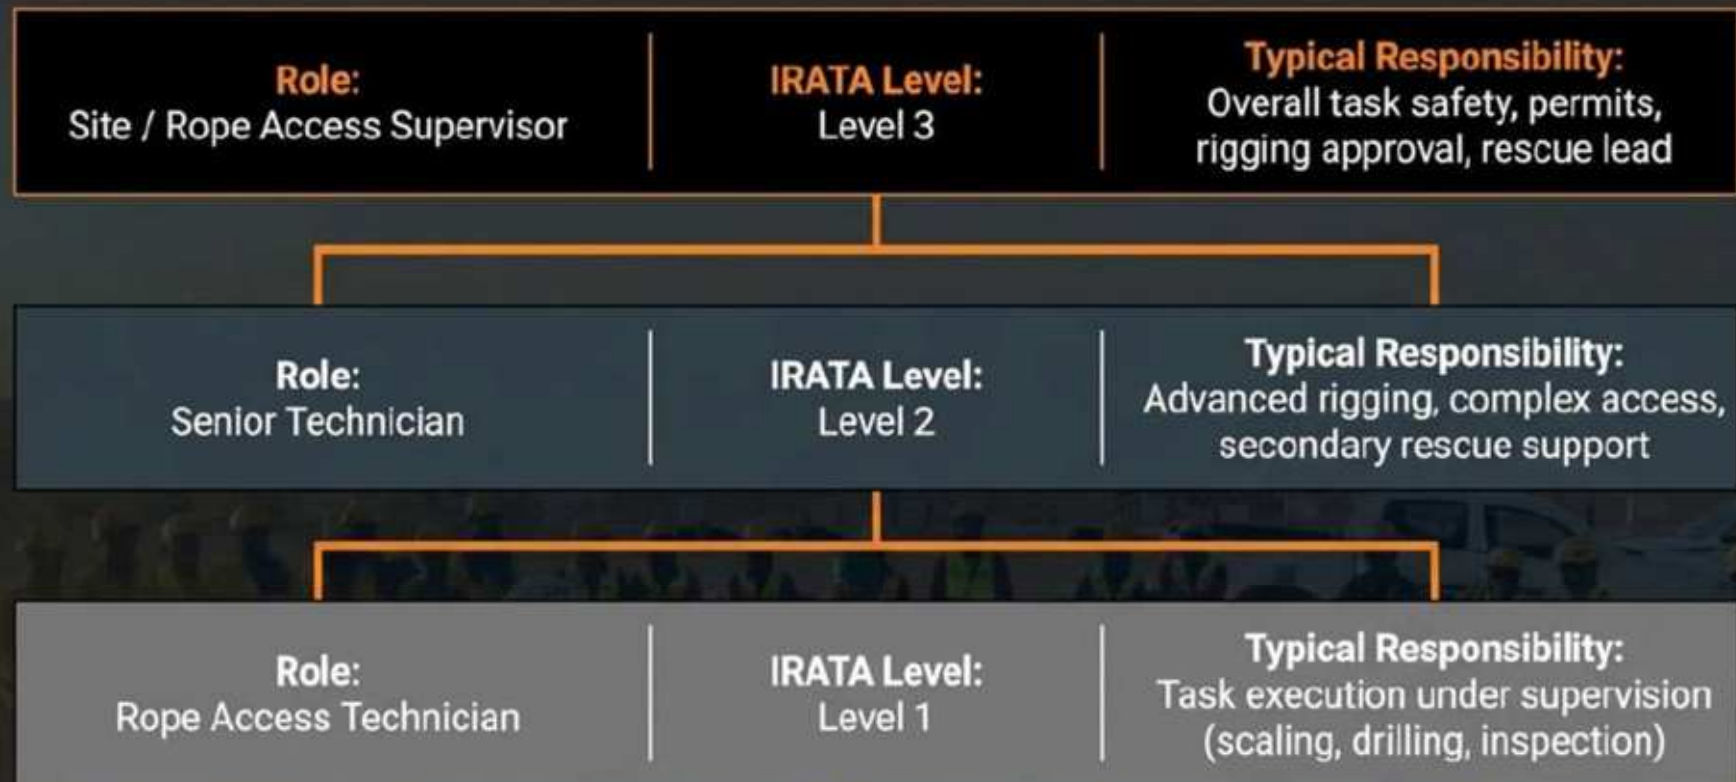

Rescue-ready operation is a non-negotiable principle of the Climbers Team: no rope access task proceeds without a briefed, rehearsed rescue plan and on-site rescue-competent personnel.

- | | |
|--|---|
| ■ Dedicated on-site Rescue Plan specific to each task and location | ■ Weather and environmental monitoring – work suspended in unsafe wind, rain or visibility conditions |
| ■ Level 2/3 technicians trained in rope rescue and casualty evacuation | ■ Exclusion zones and barricading beneath all overhead rope-access work |
| ■ First-aider(s) present on every shift; first-aid kit and oxygen kit on site | ■ Daily pre-use inspection and periodic third-party inspection of all |
| ■ Direct communication (radio) between rope team and ground support at all times | ■ Daily pre-use inspection and periodic third-party inspection of all life-safety equipment |
| ■ Emergency contact and site evacuation procedure briefed daily | ■ Full incident reporting and investigation procedure aligned with client HSE systems |

Team Structure & Roles

A typical Climbers Team crew is structured to guarantee continuous competent supervision and immediate rescue capability on every task:

Why Sawaed Arab Climbers Team

- **100% IRATA-certified crew** spanning all three technician levels, led by experienced Level 3 supervisors
- **Proven delivery on Saudi giga-projects**, including Qiddiya, Haramain Rail and Ministry of Defense sites
- **Rescue-ready operating culture** — no task without a briefed, resourced rescue plan
- Integrated capability with Sawaed Arab's wider rock cutting, reinforcement and soil stabilization divisions
- Full compliance with IRATA ICOP, Saudi HSE regulations and client-specific safety systems
- Modern, regularly inspected equipment fleet and certified PPE inventory
- Flexible mobilization across the Kingdom's regions

HEALTH, SAFETY AND ENVIRONMENT

Safety is designed into every work method

01

PLAN

Hazard assessment, access planning and task-specific controls.

02

PREPARE

Competent people, suitable equipment, permits and welfare.

03

CONTROL

Exclusion zones, inspections, supervision and environmental measures.

04

IMPROVE

Training, reporting and continual performance improvement.

Responsibility extends from top management to every person performing the work.

QUALITY CONTROLS

Technical assurance follows the approved design

- | | | |
|---|----------------------------|--|
| 1 | Design basis | Ground conditions, geometry, loads and service requirements. |
| 2 | Material control | Approved mesh, grout, concrete, anchors and protective systems. |
| 3 | Installation checks | Hole depth, alignment, spacing, fixing and application records. |
| 4 | Verification | Selected pull-out or tensile testing and documented inspections. |

Final requirements always follow the approved project design and specifications.

PROJECT DELIVERY

A disciplined model turns risk into controlled delivery

Each stage closes a risk before the next stage begins.
